Harker Heights Kiwanis Club Meeting 09-04-18

Speaker: Anthony Triola, HH Chamber VP for Business Development
Topic: Harker Heights Chamber of Commerce – is a 501(c)6. The **Military Affairs Committee** (MAC) focuses on supporting military awareness in the community and assists in bridging the gap between the community and Fort Hood. **The Governmental Affairs Committee** will focus on local, state and federal issues. Provide forums for candidate views on business issues and coordinates programs with area legislators. Our **Ambassador Program** is a great way to get engaged with the business community. The Ambassadors provide a crucial link between the Chamber and its members. The Chairman of the Board is Jim Anderson and members are partners. The Leadership class raised \$11,000 for local elementary schools. For more information visit: www.hhchamber.com.

day**

Sept 11, Oct 8, Nov 10 Flag
barn will be open at 7:15 am

FYI: Tropical Cyclone Education

Submitted by: Jos Portmann

A tropical cyclone is a rotating, organized system of clouds and thunderstorms that originates over tropical or subtropical waters and has a closed low-level circulation. Tropical cyclones rotate counterclockwise in the Northern Hemisphere. They are classified as follows:

- **Tropical Depression:** A tropical cyclone with maximum sustained winds of 38 mph (33 knots) or less.
- **Tropical Storm:** A tropical cyclone with maximum sustained winds of 39 to 73 mph (34 to 63 knots).
- **Hurricane:** A tropical cyclone with maximum sustained winds of 74 mph (64 knots) or higher. In the western North Pacific, hurricanes are called typhoons; similar storms in the Indian Ocean and South Pacific Ocean are called cyclones.
- **Major Hurricane:** A tropical cyclone with maximum sustained winds of 111 mph (96 knots) or higher, corresponding to a Category 3, 4 or 5 on the Saffir-Simpson Hurricane Wind Scale.

Tropical cyclones forming between 5 and 30 degrees North latitude typically move toward the west. Sometimes the winds in the middle and upper levels of the atmosphere change and steer the cyclone toward the north and northwest. When tropical cyclones reach latitudes near 30 degrees North, they often move northeast.
